.3

While loops

```
while [[ <some test> ]]
do
     <commands>
done
```

```
#!/bin/bash
number=1
while [[ $number -le 10 ]]
do
  echo $number
  ((number++))
done
echo "Now, number is $number"
```

Output:

```
$./while-loops.sh
1
2
3
4
5
6
7
8
9
10
Now, number is 11
```

Until loops

Output:

```
until [[ <some test> ]]
do
     <commands>
done
```

```
#!/bin/bash
number=1

until [[ $number -ge 10 ]]
do
  echo $number
  ((number++))
done
echo "Now, number is $number"
```

```
$./until.sh
1
2
3
4
5
6
7
8
9
Now, number is 10
```

For loops

```
#!/bin/sh
echo "Numbers:"

for number in 0 1 2 3 4 5 6 7 8 9
do
echo $number
done
```

Output:

```
$./for-loop.sh
Numbers:
0
1
2
3
4
5
6
7
8
9
```

e

Continue and Break Statement

Infinite loop

```
#!/bin/bash
number=1

until [[ $number -lt 1 ]]
do
  echo $number
  ((number++))
done
echo "Now, number is $number"
```

CLARUSWAY®

7

Continue and Break Statement

Break Statement

Output:

```
./infinite-loop.sh
1
2
3
4
5
6
7
8
```

CLARUSWAY®

Continue and Break Statement

Continue Statement

```
#!/bin/bash
number=1
until [[ $number -lt 1 ]]
do
      ((number++))
      tens=$(($number % 10))
      if [[ $tens -eq 0 ]]
      then
            continue
      fi
      echo $number
      if [[ $number -gt 14 ]]
      then
            break
      fi
      done
```

Output:

```
$./continue.sh
2
3
4
5
6
7
8
9
11
12
13
14
```

9

Exercise 1

- Calculate sum of the numbers between 1 to 100.
- 2. Print result.

Exercise 2

- 1. Ask user to input multiple names in a single line
- 2. Print "Hello" message for each name in seperate lines.

Functions

```
function function_name () {
 commands
```

Passing Arguments to Functions

Output:

\$./functions.sh Welcome to Linux Lessons Joe Matt Timothy

13

Nested Functions

Output:

\$./nested.function.sh
This is from the first function
This is from the second function

Variables Scope

Local variable

```
#!/bin/bash

var1='global 1'
var2='global 2'

var_scope () {
  local var1='function 1'
  var2='function 2'
  echo -e "Inside function:\nvar1: $var1\nvar2: $var2"
}

echo -e "Before calling function:\nvar1: $var1\nvar2: $var2"

var_scope

echo -e "After calling function:\nvar1: $var1\nvar2: $var2"
```

local variable_name=value

Output:

```
Before calling function:
var1: global 1
var2: global 2
Inside function:
var1: function 1
var2: function 2
After calling function:
var1: global 1
var2: function 2
```

Functions

Local variable

local variable_name=value

CLARUSWAY®

Exercise 3

Create a function named print_age that accepts one argument
 Ask user to input his/her year of birth and store it to local birth_year variable
 Calculate ago using current year value from the first argument

Calculate **age** using current year value from the first argument

Print age with a message

2. Call print_age function with 2021
